Gmailer is a powerful, yet easy-to-use Email client. It enables you to check your mail using the web, save time and be more organized. Unneeded features Not working properly Easy to use There is no need to learn any new features: Gmailer simply connects to your Gmail account, and lets you do what you want with it. It seems to be working perfectly, but when I try to send a test mail (use Simple Mail Transport Protocol, SMTP) with a valid email address that I have in the database, it does not work and I get a warning that it is failed to connect to Gmail. I can go to the Gmail page and login to the account and send emails as usual, so it is fine to be in my Gmail application but not in my mail client. For example: when I click on an email in the application I can see the message text but it says "Unable to read message - Unable to connect to Gmail". And if I send a mail with Gmailer, it says "Unable to send message - Unable to connect to Gmail". This release contains a major update, which is an improvement in the way the application saves messages and contact entries. New in this version: 1) Email accounts are now saved as a file per account. 2) Some bugs fixed, in particular the attachment download of images using Gmailer. 3) Many improvements in the internal database. 4) The ability to verify and sign messages has been added. 5) Some fixes and improvements. Version 1.4.2.0 released 17/01/2009 (Win7/Vista Only) - Fix an issue with the message log. Version 1.4.1.0 released 26/10/2008 - Fix a bug with e-mail verification. Version 1.4.0.0 released 04/10/2008 - Support for archiving messages and attaching multiple files per mail. Version 1.3.0.0 released 13/10/2008 - The "Support" link now appears by default when sending an email. Version 1.2.0.0 released 06/10/2008 - Launch Gmailer with an icon on the system tray to avoid confusion. Version 1.1.0.0 released 05/10/2008 - Support for contact information.
