

The application was developed to enable users with the means to perform a text recognition training for Tesseract. Users will be able to move their box up-down, left-right, increase its width / height, toggle the previous / next box, edit their characters or adjust letter spacing. Upon completion of the text generating process, for each inputted UTF-8 text file, the application will generate a corresponding TIFF / Box pair of files that can be used for the training.

Q: How to reset shared preferences in android? For example, how can I reset the shared preferences for a key for the next application start. I want to test if a key already exists, otherwise create it, and then in subsequent applications overwrite that key with the value.

A: You can either create an entry for that key in the shared preferences as mentioned in this question, or you can get a unique shared preference file name (using something like this code), and set that to be the key for that entry.

A: You can use SharedPreferences with SharedPreferences.Editor. For example: `SharedPreferences prefs = PreferenceManager.getDefaultSharedPreferences(this); Editor editor = prefs.edit(); editor.putString("Name", "value"); editor.commit();` [Use of Krestin in the treatment of hepatocarcinoma]. Hepatocarcinoma is a highly malignant tumor. Lately, a series of drugs such as Tamoxifen, 5-fluorouracil and cisplatin have been developed and have made a great progress in the treatment of hepatocarcinoma. Nevertheless, their therapeutic effects are limited, and the side effects are severe. Krestin, a new kind of immunomodulator drug, was found to have antitumor effects, and showed synergistic effects with cisplatin in the treatment of hepatocarcinoma. However, its therapeutic effect is still controversial. To summarize the results of the treatment of hepatocarcinoma with Krestin, so as to improve the understanding and application of this new drug. From September 1997 to January 2002, 15 patients with hepatocarcinoma received Krestin treatment, which included 6 patients with adenocarcinoma, 4 with hepatocarcinoma, 2 with hepatocellular carcinoma, 1 with carcinosarcoma and 1

KeyMACE is an application that makes it possible for users to insert macros into their text documents. While it only allows users to insert macros for text documents, it can also be used to insert macros for the most commonly used Microsoft Office programs such as Word, Excel and PowerPoint. A number of different shortcuts can be made available to the user to choose from. These include frequently used actions such as copying, sending by email or printing a document, more advanced actions such as selecting all the text in a document and splitting it into several documents, or custom actions which can be programmed by the user in order to carry out functions that would otherwise require the usage of the Windows Desktop Applications. The program is able to read most of the commonly used formats, including Word and Excel documents and is compatible with Microsoft Office 2013 or newer. In order to start using it, the user will only have to double-click the provided JAR file.

KEYMACRO Description: KeyMACE is an application that makes it possible for users to insert macros into their text documents. While it only allows users to insert macros for text documents, it can also be used to insert macros for the most commonly used Microsoft Office programs such as Word, Excel and PowerPoint. A number of different shortcuts can be made available to the user to choose from. These include frequently used actions such as copying, sending by email or printing a document, more advanced actions such as selecting all the text in a document and splitting it into several documents, or custom actions which can be programmed by the user in order to carry out functions that would otherwise require the usage of the Windows Desktop Applications. The program is able to read most of the commonly used formats, including Word and Excel documents and is compatible with Microsoft Office 2013 or newer. TessBoxEditor is a text recognition software application that will support the editing of the Tesseract's generated box data. The application will read most of the common image formats such as TIFF, JPEG, GIF, PNG, BMP and multi-page TIFF. Moreover, in addition to the aforementioned image formats, the application also supports PDF format files. Users will be able to run the application without an actual installation process, by opening the JAR executable provided in the deployment archive. The application will work with TIFF or Box format files and the training for Tesseract OCR will require an image quality of at least 300 DPI. jTessBoxEditor Features: • Setup File • Image Format • PDF • Box Format • Data File • Character Types • Tesseract Training • Hot Keys Additional jTessBoxEditor resources: • Updates • Requirements jTessBoxEditor Setup File.jAR • Setup File, compressed JAR Download link. Image File Types: JPEG • GIF • PNG • BMP • TIFF • Multi-page TIFF Word Recognition Modes: Character Level • Mask Level • Character Spacing Orientation Orientation • Page Orientation Page Order • Document Order Character Layout Layout • Character Bounding Box Layout Character Tracking Tracking • Character Tracking Distance Automatic • Manual Auto Left to Right • Manual Left to Right Automatic Top to Bottom • Manual Top to Bottom Automatic Right to Left • Manual Right to Left Automatic Bottom to Top • Manual Bottom to Top Additional jTessBoxEditor features: • Hot Keys • Box Editing • Page Order • Document Order • Character Level • Mask Level • Character Spacing • Layout • Orientation • Page Orientation • Character Bounding Box • Character Tracking • Autoscale • Data File • Tesseract Training • Training Wizard • Training Wizard 2 • Page Settings • Training wizard 3 • Training wizard 4 Last edited by jTessBoxEditor Team on Thu Jul 18, 2018 9:32 pm; edited 5 times in total jTessBoxEditor Team 2017-07-18 09:31 PM Team member Forum Posts: 8 Member Since: 2017-05-18 Offline 3

#### What's New in the?

jTessBoxEditor is an application that was created in order to provide users with a companion to the Tesseract OCR software package. It will provide the means to edit Box data resulted from versions 2.0x and 3.0x of Tesseract and it will allow them to perform a full automation of the text recognition training for Tesseract. Requiring Java as its main prerequisite, jTessBoxEditor will read most of the common image formats, such as TIFF, JPEG, GIF, PNG, BMP and multi-page TIFF. Furthermore, in addition to the aforementioned image formats, the application also supports PDF format files. Users will be able to run the application without an actual installation process, by opening the JAR executable provided in the deployment archive. The editor will work with TIFF or Box file formats and the training for Tesseract OCR will require an image quality of at least 300 DPI. The application will provide a basic set of hotkeys in its Box View window and people can use these in order to increase their editing speed. They will be able to move their box up-down / left-right, increase its width / height, toggle the previous / next box or edit their characters. Upon completion of the text generating process, for each inputted UTF-8 text files, the editor will yield a corresponding TIFF / Box pair of files that users can input when training Tesseract OCR for text recognition. In order to eliminate bounding box overlapping issues, users can adjust the letter tracking or character spacing in the image generator.
