that is a project for another day. The Most Useful Photoshop Elements Application Hacks Hack #1: App Style Window In the default template that comes with Photoshop Elements, there's only one window that shows all of the photos in a Photoshop Elements album. However, there are many times when you want to display all the photos in their original state and focus on a specific image, rather than open the whole album. You can easily add a "window" to your Photoshop Elements interface so that you can see more than one photo at a time, without scrolling through the whole album. To create a new window, you can use the the right-click menu in the Photo Bin and choose Window > New Window. If you prefer, you can also use the keyboard shortcut Command+Shift+N. The easiest way to add a window is to use the right-click option again to open the New Window dialog. Instead of selecting a window size, click the Create New Window button and select the dimensions you want. This approach may feel cumbersome if you have a lot of photos in your Photoshop Elements library but there are other ways to create a new window for the same purpose. Two of the better workarounds are to use the Arrow tool to select only a part of the photo you want to display (not all the photos in the album) or to add a cropping mask to the image. To add a cropping mask, select the photo from the Library, then hold down the Command key on your keyboard and click the Circle Selection tool (it's the tool a681f4349e

Sponges can be used to blur objects within an image, or the painting tool can be used to soften and smooth textures. Photoshop is extremely powerful, but sometimes you may need to quickly access a special feature or tool to edit an image. In most cases, you can do this directly from the keyboard and then press a combination of keys to invoke the tool. However, there are some keys on the keyboard that may come in handy while editing an image. The following list contains shortcuts for commonly used keyboard commands in Photoshop.

A Active Layer Layers are used in Photoshop to organize objects and edit layers. Active layers are transparent and have visible rectangles around them. When you add a new layer, the layer immediately becomes the active layer. To make the active layer the currently open layer, click on the color box above the Layers panel. To access the active layer's properties (transparency, blending mode, and layer mask), click on the arrow next to the layer in the Layers panel.

B Brush Photoshop brush tools are an excellent way to add textures to images. The Pen tool is great for painting pixels and lines, but the Brush tool allows you to paint or erase specific areas of the image using brush strokes. To activate the brush tool, click on the brush icon on the toolbox.

C Clone Stamp This tool allows you to copy pixels from one area of an image and paste them into another area. Use the Clone Stamp to repair damaged or corrupt images.

Ctrl To activate the Ctrl key on the keyboard, hold down the Ctrl key and press the B key.

D Desktop The desktop is the screen where you can work in your Photoshop projects. Photoshop opens files and other documents on the desktop.

Delete The Delete key on the keyboard is used to remove layers from a document, delete pixels, or even delete an entire layer. If a layer is selected, you can right-click and select Delete Layer to easily delete the layer from the document.

E Ellipse Select a

circle and then click and drag to draw a perfect circle on the image. To zoom in, hold down the Ctrl key and click and drag the mouse. F Fill Color The Fill Color feature allows you to create a color with specific properties. Use this feature to create a selection, erase part of an image, or even merge two objects into one. The Fill Color tools can be found in the Tools panel of the Photoshop

Q: how to model this dependency in a mongo db I have a mongo db that consists of two collections, Authors and Titles and a joined table, Events. Events needs to determine which author is listed on the event. How do I model this in a mongodb? Everytime I add an event I want to save both the author and title into the Events collection. So is the best way to add the event in the new event collection. A: every event created, it should have an author field that is 1 to 1 mapped to author collection. Every event created, it should have an author field that is 1 to 1 mapped to author collection. If an event may have multiple authors, you need to keep a list of authors in the event collection.
