Q: Need help creating a calendar that returns a random date between two dates I need to make an interactive website where the user adds two dates (start and end). The number of days between the two dates are then randomly determined and the 1st of each month is then

---

used as a date. So lets say I have a start and end date of 8th Oct and 13th Oct 2015, the number of days between them would be between 5-9. Therefore the end date would be between 5th Nov and 9th Nov 2015. The dates are retrieved from MySQL databases. Below is the code I have so far, but it doesn't appear to be

---

working when inserting the random dates:  
modify('+ \$num\_days days'); echo date('m/d/Y', \$start\_date). " to "  
date('m/d/Y', \$end\_date);  
?> A: Try the code below and comment if you have any concerns.

Q: how to install nfs server on debian and

---

configure mount, export etc I was trying to install NFS server on debian, but I could not have any success. I had tried many tutorials but my point is what exactly I need to know, I mean that whether I need to install NFS server daemon or I need to configure it's mountpoint and file permissions etc. A: You can either find an NFS

---

package for your distribution (all of the Debian and Ubuntu packages are available) and install it, or you can try installing it using apt-get from the command line: `sudo apt-get install nfs-kernel-server` You can then test whether the server is running by running `sudo rpcinfo -p localhost` If you're able to get a response back,

---

then you're good to go!

Q: seth when using tax\_js is my frontend registered through js or php my question is how exactly the tax\_js works? I have a client who want to manage the tax and all products with one click what I understood from the documentation is that you have to use the csrf pattern (and not the default jwt) and to let the

---

user choose a country to get the taxes done so he sent me the following code

```
if(isset($_POST['csrf-token'])) { $ctx = stream_context_create(array('ssl' => array('verify_peer' => false, 'allow_self_signed' => true ), )); $url = ""; $curl = curl_init($url); curl_setopt($curl, CURLOPT
