Let's say I have a collection of objects of type Foo, and I want to add a value to that collection. I have seen a lot of variations of syntax which

---

work: `object[] array = new object[] { 0, 0, 0 }; Array.Copy(array, array, 3);` (for the record, I am not talking about the parameters being assignment-only, but rather they are reference types (`object` and `object[]`) and I want to add all of the values for that collection to an existing object). Is there a "standard" way of doing this that I am missing? Is there any way to do this without having to create an explicit array to copy the values into? Is there any way to do this without using any features of .Net 4.0 if that makes sense? I am using it's new features for debugging purposes and trying to avoid using them for anything "user-facing". I have been getting different answers. I don't really care about whether there is a standard way, because I was also asked about the differences and here is what I found: The answers below are the "results" from someone who searched for `.Net Array.Copy` and did not find
