[Investigation of complications related to the use of autotransfusion machines during heart surgery]. Autotransfusion was carried out in 222 patients who underwent heart surgery in our department. Fifty patients in the series underwent cardiopulmonary bypass. The blood was collected with a separator used in the laboratory, and red cells were stored in blood bags. In another 152 patients blood was transferred in the form of whole blood. The separation of blood was performed in a heparinized blood separator. This blood was stored in 50 ml blood bags and transfused in the c6a93da74d
