What's New in the Net Privacy Monitor?

Net Privacy Monitor is a powerful monitoring software that you can use to easily monitor who and when is accessing your local, remote, or network shares. This software gives you the ability to see what is happening with your files and folders as well as the activities that are taking place on your network. This program will monitor your computers as well as network resources, and will alert you when someone is accessing your computer. You can block any unauthorized access to your computer. It can also be set up to monitor any other remote resources that you have such as FTP, Samba, and FTP. This freeware is an easy-to-use remote resource monitor and access control tool. It

is designed to help you avoid unwanted access to your computer resources. The free Net Privacy Monitor monitors your Windows shares. You can view the information about what files from the shares are currently opened, by what users and their IP. It also displays your active shares and enables you to disable the ones you forgot about. NPM inform you when somebody open share, you've forgotten to share off. The productivity of the computer has fallen, because somebody uses your network shares too intensively. Net Privacy Monitor features Systems Toolbar: When you run Net Privacy Monitor it will add a new system-wide toolbar on your desktop which has the following features: General - Show the information about the shared folders currently open on the computer (they are under the "Shared" icon). Access - This button allows you to view which users and their IP are accessing shared folders on the computer. Shared - This button opens the list of the shared folders on the computer. Performance - This button shows the network usage data. All other features are in the user interface. Monitor any remote resource: This software allows you to monitor FTP, Samba, Remote Desktop, WebServer, WebDAV, and other remote resources. Net Privacy Monitor displays information about all the resources and activities that are taking place on the remote resources. The user interface of this software: You have two ways to monitor a resource. Either you can open the special Window to see the information about the current resource, or you can access the resource directly from the main window of Net Privacy Monitor. Useful and easy to use: This software is very easy to use and requires no special knowledge. It has a user interface that is simple, and it is easy to understand. It does not have the features of a powerful commercial program, it has the basic features, and is quite enough for what it does. Net Privacy Monitor screenshot: You can download Net Privacy Monitor from its official website. Net Privacy Monitor for Windows XP SP2: This version of Net Privacy Monitor does not have the option to disable the trackers. This means that your Internet browser will load
