Fayimora Aquarium Crack+

Fayimora Aquarium is an aquarium simulator that allows users to enter a virtual aquarium and watch digital fish swim around in it, or to be more precise, 'grow'. By default, Fayimora Aquarium is set up to automatically run in the background, so all users have to do is open it, and once it's opened they have 30 minutes to look at the fish swimming around. Users can watch the fish do their thing, or even decide to do things to the fish such as feeding them or reducing their health. If users want to see more than the default 30 minutes they can be fed more time, by purchasing a pass. Users can also be sent messages that appear on their screens and the fish as well. These messages can be private, or they can be sent to other users. Fayimora Aquarium has a number of settings and features, including:

- Customize the aquarium: Users can change the aquarium to be a different shape, set the size of the fish, change the number of fish, change the fish's speed, and choose whether they want to have jellyfish as well.
- Add fish: Users can add fish to the aquarium. Once they've chosen the fish they want, the fish will appear in the tank, and the user can control their behavior, such as whether they should be aggressive or shy.
- Choose music: Users can set the soundtrack of the aquarium, and can add additional tracks if they want to.
- Change settings: Users can change some settings, such as the time and date, and the number of fish, and also the number of words in the messages.
- Feeding fish: Users can feed fish to make their health higher, or even add them jellyfish or pearls to their aquariums to make the fish look better.
- Watchfish on your desktop: Users can also watch real fish swimming around on their desktop, with the fish being animated.
