With the next iteration of the Creative Cloud, the designers will get an UI rich Photoshop experience for sharing and collaboration with the nearby technology and set of tools. Users will now be able to seamlessly navigate and interact with all the tools on the desktop Photoshop, from filters to adjustment layers and more. All the tools on your screen will have a back and forward history. This will spice up the Photoshop workflow and make it easy to review all the recent actions. The tool panel will also be substantially updated with more tools such as built-in Lens Correction and the new See Also feature that helps users to easily navigate all the related tools. True dual monitor support is most important for designers and we can see that in the new Photoshop 2020 feature with inbuilt support for Dual Monitor. The feature will make it easy to position Image panels to the dual monitor display and work on the same in parallel to avoid the need to resize image in a second window. True dual monitor support will be tested in the upcoming release too, as the designers already has the experience of true dual monitor support on their Mac. With this next release of Photoshop, designers will be able to have multiple monitors fine-tuned with a wide range of resizing options by using high-resolution display and high-DPI screens. They will be also able to scale artboards' resolution to fit any type of visual tool and in any resolution seamlessly. The user interface has also been upgraded, and they will find the theme renamed to UI, Creative and View. In the next version of Photoshop the UI and creative features have been enhanced and redesign to improve the workflow.
