Much of the next few releases of Photoshop will be focused on tightly integrating the application with CC (Creative Cloud). As the integration advances, we want to ensure that the productivity of our customers using CC is not hindered by the complexities of multiple credential systems or software. For these reasons, we are now requiring that all Photoshop Library users use Adobe Creative Cloud account credentials to access the Creative Cloud membership. If you'd like to access Photoshop Library for use without the Creative Cloud membership, we will be offering a stand-alone version of Photoshop Library in a future release. This is simply the biggest update in version history, and for folks who've had Adobe technology around for some time, this may seem like more of the same. I'm not saying it's all good (and there are some regressions), but there are plenty of improvements and some pretty big changes:

- You can now create prosumer-class still images, or render 8K video - without the need for a display panel.
- We've greatly extended our capabilities for full-photo retouch; there's a quite interesting new workflow.
- We've made massive improvements to our RAW editor and the metadata editor.
- The UI has a few extra goodies, including a bit of social media.

Funny thing: My ISO 800+ D800 black-and-white test photos (shot with an 85mm prime) look pretty good when opened in Photoshop without any edits. If you extend the file because it's an APS-C camera, you get really poor performance. That's because they're incredibly tiny (less than 0.5m), but a 25MP file can only fit 207mb (at 24MP)!
